Description

The Flash Red Intensity Standard is a kit consisting of five populations of ~8µm polystyrene-based microspheres dyed with increasing amounts of Flash Red fluorophore. The different intensity populations may serve as relative intensity standards for fluorescence-based applications in microscopy or flow cytometry and, as internally-dyed beads, they will stand up to the rigors of imaging. As Flash Red is spectrally similar to CyTM5, traditional red fluorophore filter sets (e.g. Cy5/microscope; PE-Cy5 or APC/cytometer) may be used with this standard.

The beads may also serve as bright relative intensity or linearity standards for flow cytometry; ask about our QuickCal® Linearity Template.

Characteristics

Mean Diameter: ~8µm
 Particle Count: ~1.5 x 10⁷ particles/mL
 Particle Concentration: 0.5% solids
 Buffer: DI water + 0.01% Tween® 20 + 2mM NaN₃

Flash Red (660, 690)

Storage and Stability

The reagent should be kept in its opaque bottle and stored at 2-8°C. Freezing may result in irreversible aggregation.

Safety

This particle suspension contains sodium azide. Sodium azide may react with lead and copper plumbing to form explosive metal azides. Upon disposal of material, flush with a large volume of water to prevent azide accumulation. Please consult the Material Safety Data Sheet for more information.

This product is for research use only and is not intended for use in humans or for *in vitro* diagnostic use.
