Polysciences, Inc. Announces New Melanin Bleach Kit

Warrington, PA., Nov, 2008 - Polysciences, Inc., has introduced the Melanin Bleach Kit, the newest addition to the line of products for the histology professional in a convenient kit format. The Melanin Bleach Kit removes melanin pigment in cells of malignant melanomas to clearly reveal cellular detail. Accumulation of heavy melanin pigment in the cells of malignant melanoma can obscure cellular morphology and can hinder special staining, immunohistochemistry or histochemical staining. The Melanin Bleach Kit saves time by removing melanin pigment from tissue sections allowing for positive staining to be interpreted correctly.

About Polysciences, Inc.

Headquartered in Warrington, PA., Polysciences, Inc. is a leading manufacturer of laboratory supplies and specialty monomers/polymers for microscopy, histology, biotechnology, electronics and other industrial applications. Although Polysciences offers a full line of off-the-shelf products for the medical, life sciences and research community, its specialty is developing custom-synthesized polymers and monomers for customer-specific needs. Polysciences produces encapsulants and other specialty products for the electronics industry and is an FDA/cGMP facility for the manufacture and packaging of ultra-pure specialty products for the healthcare, pharmaceutical and personal care industries. Polysciences has a more than 40-year history of successful partnerships with industry in developing new materials for emerging applications. Polysciences maintains facilities in Warrington, PA and Eppelheim, Germany. In addition, its wholly-owned subsidiary Bangs Laboratories, Inc. is located in Fishers, Indiana.
